

OKSNHC GLUE ON SHOE SUPPLY LIST

[Duplo Classics](#), [Duplo Base Plates](#), [Easyshoe Versa Lights](#), [Easyshoe Octos](#) or [Easyshoe 3D's](#)

If using Duplos or Versa Lights, or resetting and removing tabs, you will need replacement [11 finger tabs](#) or my favourite, [Wolf Busch Tabs](#). Wolf Busch tabs last longer and are easier to reset as they are thicker.

To plastic weld tabs you will need a [heat gun](#), [Duplo Welding Table](#) (optional but amazing) and [reducer](#) (only if not purchasing a welding table as it comes with one. My favorite heat gun is this one: <https://amzn.to/3WrduXP>

[Heat Gun Reducer](#) (you only need the circled one, but it usually comes as a set.

[Artimud](#) to apply under the shoe to prevent thrush.

[Maxicure Glue](#) and [Insta Set Glue Accelerator](#)

Nitrile gloves, my favorite are: <https://amzn.to/4c4kphi>

[Plastic Wrap](#) with a non swivel handle, ideally 150 gauge. Any thinner and it's hard to wrap tightly without breaking.

[Hoof Buffy](#) for sanding a prepping hoof surface. The drill I use for my Hoof Buffy is this one: <https://amzn.to/4d724zB>

Alternatively, you can use a [sanding block](#), but it doesn't finish the hoof as nicely or as effortlessly.

Rubbing alcohol spray to clean the hoof surface: <https://amzn.to/4fCXlrh>

Optional or for rehab cases: [Shudim Hoof Packing](#) and [Mesh](#)

For shaping and grinding shoes and removing old tabs I use a [bench sander](#) or in the field, a [4 1/2 inch angle grinder](#) with an [80 grit flap disc](#).
